Publisher's Disclaimer. E-publishing ahead of print is increasingly important for the rapid dissemination of science. The Early Access service lets users access peer-reviewed articles well before print/regular issue publication, significantly reducing the time it takes for critical findings to reach the research community. These articles are searchable and citable by their DOI (Digital Object Identifier).

The Journal of Public Health in Africa is, therefore, E-publishing PDF files of an early version of manuscripts that undergone a regular peer review and have been accepted for publication, but have not been through the copyediting, typesetting, pagination, and proofreading processes, which may lead to differences between this version and the final one.

The final version of the manuscript will then appear on a regular issue of the journal.

E-publishing of this PDF file has been approved by the authors.

To the Editors
This letter briefly presents the role of the Italian Waldensian Church “Eight for One Thousand Project” funds in the implementation of some projects in Central Africa.
The Italian Waldensian Church (Union of Methodist and Waldensian Churches) Eight per Thousand (8%=0.8%) funds is the percentage of income tax that Italian citizens can assign to the State or to a religious denomination to support activities of social and cultural importance of non-profit organisations. These funds are exclusively intended for the implementation of educational, social, health, humanitarian and cultural interventions in Italy and abroad. Applicants, such as organisations belonging to the Union of Methodist and Waldensian Churches national and international ecumenical organisations, associations (associations, committees, NGOs and non-profit organisations, provided that the grant requested is used for the purposes of Law 409 of 1993, i.e., for charitable, humanitarian, cultural and non-profit purposes), may receive 8 per thousand grants.
The projects financed for 2018 by the Union of Methodist and Waldensian Churches through the 8 per thousand funds, divided into 454 projects abroad and 673 projects in Italy. Over the years, the
number of projects financed by this fund has increased, in 2020 the number of applications rose from 3974 to 4596 (3560 for Italy, 1036 for abroad) (https://www.ottopermillevaldese.org/english-version/). It is interesting to note that the number of projects for environmental protection has almost doubled. In 2022, the funds were used to finance 450 projects abroad and 1107 projects in Italy in the educational, humanitarian, socio-medical and cultural fields. Africa was among the largest projects approved abroad (https://www.ottopermillevaldese.org/progetti-approvati-2022/).

The geographical distribution shows that in the 2019 among the projects financed outside Italy, the distribution of funds in Africa was as follows 18.8% went to West Africa, 5.05% to Central Africa, 8.08% to Southern Africa and 11.11% to East Africa and the Horn of Africa. In 2020, Central Africa received 4.86% of externally funded projects, with an increase in 2021 (7% for Central Africa). The beneficiary countries of these funds were the Democratic Republic of Congo, Cameroon and Chad (Figure 1) in all the above-mentioned action sections but specially for the technological innovation and health improvement.

With the Covid-19 pandemic, the Union of Methodist and Waldensian Churches has increased a section linked to the Covid-19 emergency fund, of which 4.37% (€1,070,000) in 2020 and 2% (€1,700,000) in 2021 will be used for externally funded projects. In Central Africa, funds for Covid-19 were directed towards the Covid-19 Contagion Prevention Campaigns and Technology Transfer and International Health Cooperation for Covid-19 Prevention. Particular emphasis was placed on strengthening the capacity of health workers to diagnose and treat people. This 8 per thousand initiative is an example to be encouraged particularly in African countries to support education, health and rural development projects. In the last call, a proposal was presented to promote rural development in a west Cameroonian department through the strengthening of local tomatoes production/transformation chain, and the reduction of postharvest losses supporting the involvement of women cooperatives.

In particular, in Chad, the funds received by the Italian Geographical Society (a non-profit organization) have been used to reinforce the Laboratory for Major Tropical Epidemics (LAGET) allowing the serological surveillance of Covid-19 infection in the capital city N'Djamena and in others ten provinces of Chad. The data obtained showed a high level of circulation of the virus in the 2021 and 2022, which is surprising considering the low level of morbidity and mortality caused by Covid-19 in Chad. The LAGET, inaugurated on 12 December 2020 at the presence of the General Director of the Ministry of Public Health and Solidarity of Chad, Dr Ismael Barh Bachar, is a biomedical analysis laboratory created to support the efforts of Chad and its partners in the fight against the Covid-19 pandemic. Realised by the MAGIS Foundation, a non-governmental organisation of the Euro-Mediterranean Province of the Society of Jesus, and financed by the Italian
Agency for Development Cooperation (AICS), today it is active in the fight against hepatitis B and C, AIDS and drug resistance. It is committed to prevention, epidemiological surveillance and treatment of diseases to ensure a healthy life and promote the well-being of all at all ages (2030 Agenda, SDGs 3), to end the epidemics of AIDS, tuberculosis, malaria and neglected tropical diseases. It functions to combat hepatitis and other communicable diseases, place of training for biologists, laboratory technicians and medical students at the Le Bon Samaritain University-Hospital Complex in N'Djamena, in Walia suburban district, runed by the Jesuit Fathers.

At a time when the Covid-19 pandemic has touched the Europe, with catastrophic predictions by the World Health Organisation on developing countries, MAGIS Foundation, as a missionary organisation of the Society of Jesus, has not closed in on itself, but relaunched cooperation with external partners in Africa, Asia and Latin America by sending funds to purchase personal protection devices, health equipment, and basic supplies to alleviate the damages caused by the pandemic. Substantial efforts have been directed at Chad, where many hospitals and health services are also runed by religious communities, which are recognised in all respects as key actors in community participation activities, with a health model that focuses on prevention, disease treatment and training of health personnel, particularly nurses, laboratory technicians and doctors. Religious leaders, active despite the low resources of the Chadian socio-economic context, have been working for years to mitigating the disastrous situation that an epidemic can do, committed to remove the structural causes of underdevelopment with a medium- to long-term approach offered by quality education. Because the goal is always to improve human conditions and, indeed, the case in Chad has shown that religious truths, scientific truths and government policies have not been mutually exclusive but rather have worked together for the common good and the well-being of all.
